

9<sup>rd</sup> International Workshop On Wave Hindcasting and Forecasting

Victoria, B.C. 24-29 Sep 06

### Lihwa Lin<sup>1</sup>, Ray-Qing Lin<sup>2</sup>, Jerome Maa<sup>3</sup>

<sup>1</sup> U.S. Army Engineer Research & Development Center Coastal & Hydraulics Laboratory

<sup>2</sup> U.S. Naval Surface Warfare Center, Division of Seakeeping

<sup>3</sup> Virginia Institute of Marine Science

# Outline

- 1. Numerical Model
- 2. Wind Input Function
- 3. Wave Dissipation
- 4. Case Studies
- 5. Summary and Conclusions

![](_page_2_Figure_0.jpeg)

Governing Equation (Steady State, two-dimensional spectral model) – Wave-Action Balance Equation with Diffraction (WABED), Mase et al. 2001

$$\frac{\partial [(c_{gx} + u)A]}{\partial x} + \frac{\partial [(c_{gy} + v)A]}{\partial y} + \frac{\partial [c_{g\theta}A]}{\partial \theta} = \frac{\kappa}{2\sigma} \{(cc_{g}\cos^{2}\theta A_{y})_{y} - \frac{1}{2}cc_{g}\cos^{2}\theta A_{yy}\} + S_{in} + S_{dp}$$
where  $A = E/\sigma$  is the wave-action spectrum and
 $E = E(\sigma, \theta)$  is the directional wave spectrum.

Here *x* is normal to seaward boundary, *y* is parallel to seaward boundary

![](_page_3_Picture_0.jpeg)

# **2. Wind Input Function**

$$S_{in} = \frac{a_1 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) E_{PM}^*(\sigma) \Phi(\theta) + \frac{a_2 \sigma}{g} F_1(\vec{w} - \vec{c}_g) F_2(\frac{c_g}{w}) F_3(\frac{c_g}{w}) F_3(\frac{c_g}{w})$$

$$F_{1}(\vec{w} - \vec{c}_{g}) = \begin{cases} w\cos(\theta_{wind} - \theta) - c_{g}(\sigma, \theta), & c_{g} < w \\ 0, & c_{g} \ge w \end{cases}$$

$$F_{2}(\frac{c_{g}}{w}) = \begin{cases} (\frac{c_{g}}{w})^{0.8}, & F_{3}(\frac{c_{g}}{w}) = \begin{cases} \log_{10}[(\frac{c_{g}}{w})^{-1}], & c_{g} < w \\ 0, & c_{g} \ge w \end{cases}$$

$$E_{PM}^{*}(\sigma) = \frac{g^{2}}{\sigma^{5}} \exp(-0.74 \frac{\sigma_{0}^{4}}{\sigma^{4}}), \ \sigma_{0} = g / w, \text{ and } \Phi(\theta) = \frac{8}{3\pi} \cos^{4}(\theta - \theta_{wind})$$

![](_page_4_Picture_0.jpeg)

# **3. Wave Energy Dissipation**

- White capping

where 
$$S_{dp} = -C_{ds}(ak)^{1.5} \frac{\sigma}{g} c_g(\sigma, \theta) F_4(\vec{w}, \vec{u}_{current}, \vec{c}_g) F_5(kh) E$$
  
and  $F_4(\vec{w}, \vec{u}_{current}, \vec{c}_g) = \left| \frac{\upsilon + w}{\vec{w} + \vec{u}_{current} + \vec{c}_g} \right|, \quad F_5(kh) = \frac{1}{\tanh kh}$ 

 $a = \sqrt{E(\sigma, \theta)} d\sigma d\theta$ , wavelet calculated for each grid cell

- Breaking

Miche's and Goda's breaking limitations:  $S_{dp} = -\varepsilon_b A$ 

- Bottom friction

$$S_{dp,fric} = -C_f \frac{\sigma}{g} \frac{\langle u_b \rangle}{\sinh^2 kh} E$$
, where  $\langle u_b \rangle = \frac{1}{2} \sqrt{\frac{g}{h}} E_{total}$

![](_page_28_Picture_0.jpeg)

### Measured and Calculated Directional Spectra MCR Sta 3 - 18:00 GMT, 9 September 2005

![](_page_28_Figure_2.jpeg)

![](_page_29_Picture_0.jpeg)

- 1. Wind input and wave energy dissipation functions developed from previous studies (Lin & Lin, 2004) were implemented in a directional spectral model to simulate wind wave fields at two sites.
- 2. The comparison of model results with data shows that the effect of non-linear wave-wave interactions is significant in shallow water.
- 3. The calculated wave growth is significant along the coast under a moderate wind as compared to model result without wind input.
- 4. The present model does not calculate the nonlinear wave-wave interaction. As a result, the model spectrum tends to skew toward higher frequencies and has a narrower directional distribution as compared to data. Future studies will describe the nonlinear wave energy transfer and comparison with additional data.
